

PENTESTS

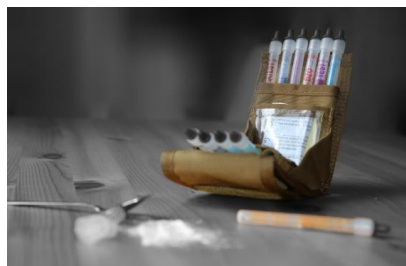

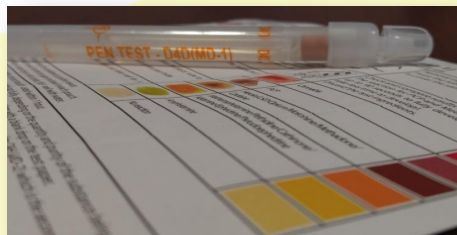

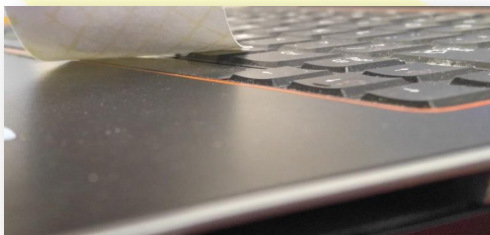

Swipe! Drop! Read!

PenTest is an ampoule-based version of Mistral's unique aerosol drug product technology. PenTests are easy and fast to use and safe because they do not use acids.

Of the eleven PenTests, one is the D4D PenTest that can detect/identify nearly two dozen drug types. That, combined with the Coca PenTest, covers most of the non-synthetic drug types.

The fact that only two PenTests can cover most drugs makes this product very cost/effective. Each PenTest is capable of at least two tests before disposal.

What further distinguishes PenTests from other products is that PenTests can perform trace detection as well as bulk identification. This makes PenTests as unique as the aerosols as investigative tools for narcotic units and task forces, as well as K-9 units and security agencies.

PENTEST DETECTION COLOR CHART

	D4D	Other Tests									
	General Screening	C&H Confirming	Cannabis	BarbitSol	BZO	Coca-Test	Ephedrine	Herosol	LSD	Meth-Test	OpiaTest
